Keep in mind that any Chapters titled with the word "Mandate" is only meant in terms of how the findings presented there are worth a look

Chapter 24

Military Engineering Mandate(Israel, USA)

Mars 360 as a social system also relates to its value as a military system. By effectively using Mars placements to allocate military personal to appropriate environments that would entail sort of a virtue signaling for Mars, allows for a harmonious outlook regarding military expenditure. Each placement of Mars would infer an advantage to some extent, depending on the duty. For instance, since Mars in the first seal represents a lack of energy toward proper face to face communication, duties involving direct unfiltered commands would be carried out without hesitation. This placement infers an advantage for drill sergeants and ground leadership where constant blunt interaction is required in order drive home a command. By making this a requirement for a command-giving position, administration would be ensured of orders being given without hesitancy or fear on the part of the person giving them.

Mars in the second seal provides an advantage for aspects of the military that involves the use of hostile force. This placements gives an advantage to those who have to carry out orders that involve the unrestrained neutralization of an enemy target, along with the ensured survival of the personnel carrying out the mission. Because of a natural restlessness that this placement brings about, this placement makes well for foreign missions involving lots of variety and movement. This would likely be the standard ideal placement for general infantry assignments.

Mars in the third seal has an advantage since Mars places a lack of energy on personal survival instinct regarding one's own health.

Therefore this placements infers an advantage for dangerous missions where the outcome regarding one own health would also provide some protection to other soldiers if their duty requires it. This placement is the standard for what constitutes a War hero.

Mars in the 4^{th} seal would not be perfectly suited for combat duty, but would be standard for administration in support of the Military and also peacetime propaganda. This placement of Mars creates the highest form of nationalism and patriotism, even if it doesn't produce the greatest combat soldiers. All activities involving keeping morale high would be standard for this placement and would keep a nation together in terms of its outlook. Because of the lack of fear related to indirect speech, this placement of Mars finds an advantage in gathering support against an enemy.

Mars in the 5^{th} seal would not do well in positions under authority. From a military standpoint, this type would be disadvantaged in dealing with the authoritative aspects of the military. There may be some independent research that this type could do to serve the military in some way. However, this is usually a mark of pacifism and would be advantageous in situations needed to keep a military out of War. This placement would be the key to diplomatic solutions from a military perspective.

Mars in the 6^{th} seal would provide an advantage in terms of working out of view of others. It's important to note that this is also a pacifist out-look. Since this placement creates a social awkwardness and lack of energy toward one's appearance, this person would have an advantage

in duties that are more introverted in nature. Classified information would also have a greater deal of protection. All military scientific research that requires hours of private study would be of an advantage to the person influenced by Mars here. The technological cutting edge approach to garnering military advantage via hours of study would be standard for Mars in the 6th seal. In this manner, Mars in the 6th seal becomes a major asset to the Military. Important to note that this placement is not a war advocator even though it can perform the necessary research.

Under Mars 360, this allocation of the human condition to its rightful element can be correlated to how the Geneva convention decides the rules of war. A full expression of this human condition gives everyone a sense of freedom regarding how they feel the world should be. Under Mars 360, Mars's expression of pacifism would have the same right to exist as the Mars expression of conflict. This is how Mars 360 defines peace. It's important to remember that Mars 360 is trying to get every single person on Earth to feel that the world understands him. In achieving this, and allowing a certain level of expression, it prevents the oftentimes overwhelming backlash when the pendulum has swung for too long in one direction. A good analogy is how the federal reserve is designed to protect the market from black swan events, unforeseen circumstances causing disruption in the market, by controlling interest rates according to where they feel the market may be headed.

The presence of a Military according to Mars 360 wouldn't necessitate to War, nor would it necessitate to Capitulation. It will, however, be conducive to full human harmony because everyone would understand that the source(Mars) which drives conflict-acceptance is the same source that drives conflict-avoidance. There is

a certain balanced to be striked here which will make all parties very happy. It also provides cheques and balances within the military industrial complex between conflict advocates and peace advocates, as opposed to peace advocates operating outside and against the military sphere. This allows for resolution to trickle down to the rest of society. With an education program that distinguishes for Mars placement, one is left with a uniform element regarding preparing for society and being military prepared in a way that is compatible with everyone's Mars placement. Military involvement doesn't equate to War in this case. There is a certain sensitivity to the nature of Mars that needs to be maintained in order to stabilize the health of human perspective. A diplomacy first mandate allows for that particular Mars expression of conflict-avoidance to operate alongside the realm of conflict-acceptance and the military industrial complex.

Due to a possible correlation of Mars to foreign attacks, the Mars 360 observation program would be a useful investigation by military personnel. In this example pertaining to the United States, there have been 3 major attacks on US soil that provoked the US military into international conflict. All 3 have a major similarity pertaining to Mars that cannot be ignored. In all 3 attacks, Mars was in the 1st seal at the time they took place. Here are the charts for the 9/11 terror attack, pearl harbor attack, and the black tom explosion respectively. These are calculated using the exact time in which events happened.

We can see in all three charts, which are calculated with the exact time that the event took place, a shared common placement of Mars in the 1st seal shows up. Not only that, each attack took place when the moon was within the signs of Cancer and Leo. This is enough to warrant a further investigation. Mars 360 would even determine that a period of vigilance may be required during that timeframe. In my research, overall, the moon passing through the Cancer and Leo/Aquarius and Capricorn axis seems to also correlate to major catastrophic events taking place in the United States. Mars in the first seal however is the most interesting sign that seems to keep showing up around the time attacks take place. This would essentially equate to Mars 360 calling down fire from heaven.

The system of cheques and balances within the military framework keeps a balance between Mars's expression and human necessity. This

accommodation of peace-seeking zeal by the military allows for a country to keep its bearing with regard to its intention to sustain itself. As Mars 360 spreads, there would be more mutual understanding about the dynamics of the human condition as it relates to a military. It's important to recognize the military as already a natural expressive outlet for Mars, which is essential for the sustenance of civilian life. The Mars effect of restlessness gets a channel through military life by way of travel and movement, as that is often a requirement in military directives. Removing military altogether would also remove an effective channel for Mars expression. This would put societal stability in jeopardy as now the expression of Mars related to restlessness and need for constant change would find another way to assert itself. It would be easier for military construct to accommodate the expression of Mars that looks to avoid conflict and constant change than it would be for civilian life to accommodate the Mars expression of constant change and mobility.

--The rest of the Chapter is in regards to Israel and Palestine conflict--

An example of how Mars 360 can be used in real time would be very applicable to the current situation in Israel. Israel became a nation in 1948 and has been subjected to increasing hostility from its Arab neighbors. When the UN Partition Plan for Palestine was approved in Nov. 29, 1947, the land of Palestine became allocated between independent Jewish and Arabs states. This plan was rejected by the Arabs, who were already situated in Palestine centuries before during the Ottoman empire. After defeating the Ottoman Empire in WWI, the British promised the Arabs living Palestine that they would get all

of Palestine in exchange for having helped them defeat the Ottomans. The British also made the Balfour declaration in 1917, which publicly stated support for Jewish people to have their own land in Palestine. This leaves the British having to live up to their end of 2 promises that don't align with each other. Since the British and the Arabs began its fighting against the Ottomans in 1915, which is 2 years before the Balfour Declaration, one can say that promises about the land in Palestine were made to the Arabs first. This would indicate the Balfour declaration to be a violation of that promise. However, this does not put the Jewish people at fault since they could have only looked for the British to keep their word. A good analogy is only having 5 dollars in your pocket and making a promise to friend1 that you would pay him 5 dollars and then later making a promise to friend2 that you would pay him 5 dollars.... the same 5 dollars you were going to give to friend1. Friend 2 in this case is not responsible for any irresponsibility on the part of the one who made the promise, but friend 1 , however, is more deserving of the 5 dollars from the promiser than friend2. Since friend 1 and friend 2 had no interaction in the matter, this argument of who deserves what cannot be used in the aspect of later interaction between friend 1 and friend 2. The only solution by the promiser is to split the 5 dollars between the two. However, the result of that in terms of how it applies to Palestine, with Arabs rejecting any split of the land, still points in favor of the Arab justification. The only solution is for friend1 and friend 2 to confront the promiser and place the responsibility upon him to settle the matter according to how he promised to originally settle it. Because of the impossibility of this, it must become his responsibility to compensate the side that was most negatively affected by the transaction, which in this case would be friend 1(arabs). Since the UN was the final decider of how the land would be allocated between Arabs and Jews, the UN is left with the responsibility of figuring out how to compensate the Arabs for a broken promise made to them by the British, who managed to further exacerbate the matter by supplying

arms to Israel. In retrospect, the Jewish people were willing to accept partition plans that were in favor of Arab control over most of Palestine. The Arabs, however, wanted control over all of Palestine, with any Jewish presence there being left up to Arabs and not anyone else. Since Jews and Arabs have lived together peacefully for centuries, this attitude by the Arabs could in no way be assigned to an ethno-centric viewpoint, as much as it is to a political and control viewpoint based on principle. After rejecting the partition plans by the British, who in turn later handed control over the situation to the United Nations, the Arabs gradually continued to lose any chance of not only getting all of Palestine, but also the chance of Palestine continuing to be allocated in their favor. During WWII, the holocaust became a catalyst to UN partition plans for Palestine leaning in favor of Jewish control as opposed to previous ones that leaned in favor of Arab control. Finally, in 1948, the Jewish state in Palestine officially became the nation of Israel and violence between Arabs and Jews have become mainstay ever since. From that point, the Arabs decided to invoke their UN right that maintains that nations have a right of self-determination to pursue their political, economic, cultural, social, and religious development. As a result, they(Arabs) waged war against the Jewish state and used military force to try and claim all of Palestine. The Arabs had every intention of carry this out on their own, but since the Jewish states initially gathered help from European countries, the Arabs were left having to do the same, seeking the help of other nations like the USSR, which as a result, brought the conflict to the attention of the United States, as they were closely watching Russia due to Bolshevik declaration of a worldwide communist revolution in the early 1900s. Overtime, as the Jewish state fought off Arab aggression continuously and in the process, gained more land than was originally assigned, the Arab

living space in Palestine began to dwindle. Today the Arabs are concentrated to Gaza and parts of the Westbank. It's important to remember that the initial recognition of the Jewish state in their UN designated spaces in Palestine in 1948 did not usher in a forced exodus of the Arabs from those territories. The Arabs could stay but had to recognize the space as Jewish territory. It wasn't until after the Arabs waged war, which compromised the Jewish state's internal security and provoked sporadic terror attacks in Jewish territory, that the Jewish state felt the need to drive out or restrict the Arabs already living in the designated Jewish territory.

Today justification may be regarded in favor of the Jewish state as the Arabs conceded under the leadership of Yasser Arafat, who signed an accord in the early 1990's officially recognizing the Jewish state of Palestine, and thus accepting the process of developing a 2 state solution for all of Palestine. This was the first Palestinian recognition of the independent Jewish state. However, this was not accepted by a group of Arabs who are known as Hamas, an internationally recognized terrorist group. The result of Oslo officially made Hamas the number one resistance to the Jewish state in Palestine. Hamas took over Gaza in 2007 and their presence there revolves around continued conflict with the Jewish state. Firing rockets into Israeli territory on a regular basis, Hamas has become the main resistance to any chance of peace between Arabs and Jews.

The conflict between Hamas and Israel can easily be relegated to Mars 360 as there is a pattern between the location of Mars and the amount of rockets fired from Gaza. Once again, we would have an example of Mars bringing fire down from the sky. What these findings do is make it mandatory for Mars to be observed from a military perspective, especially when it could be a matter of danger or safety. On the next page is a chart of all the rocket attacks against Israel since 2007. Notice the times when there has been a spike in rocket fire relative to the year it happened. These statistics are taken from wikipedia https://en.wikipedia.org/wiki/Palestinian_rocket_attacks_on_Israel.

Note: in 2019, the heaviest rocket fire from Gaza took place in May. 600 rockets were fired from Gaza on Israel

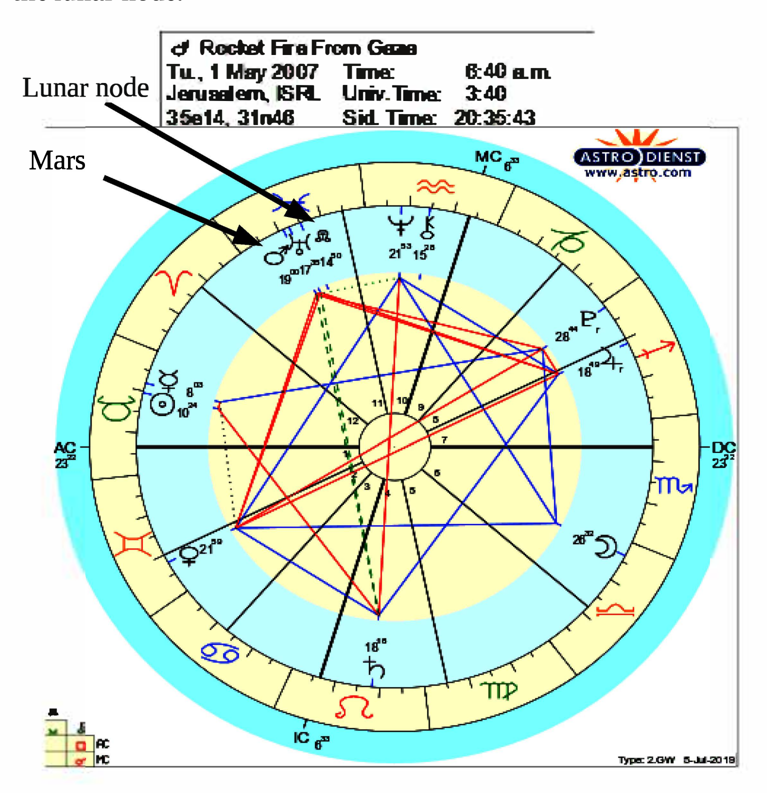

If we observe the number of rocket attacks from Gaza starting back around 2007 in "Figure H", you'll notice an asterisk next to some of the numbers. This indicates the month where the largest barrage of rocket attacks from Gaza were concentrated that year. We will reference "Figure H" when we pull up the astrocharts to see how the location of Mars correlates.

In my research of how the position of the Planet Mars correlates to rocket attacks from Gaza, I found that Mars's location near the lunar node on both sides of the chart shows up around the time of escalating rocket fire. Here is what I mean:

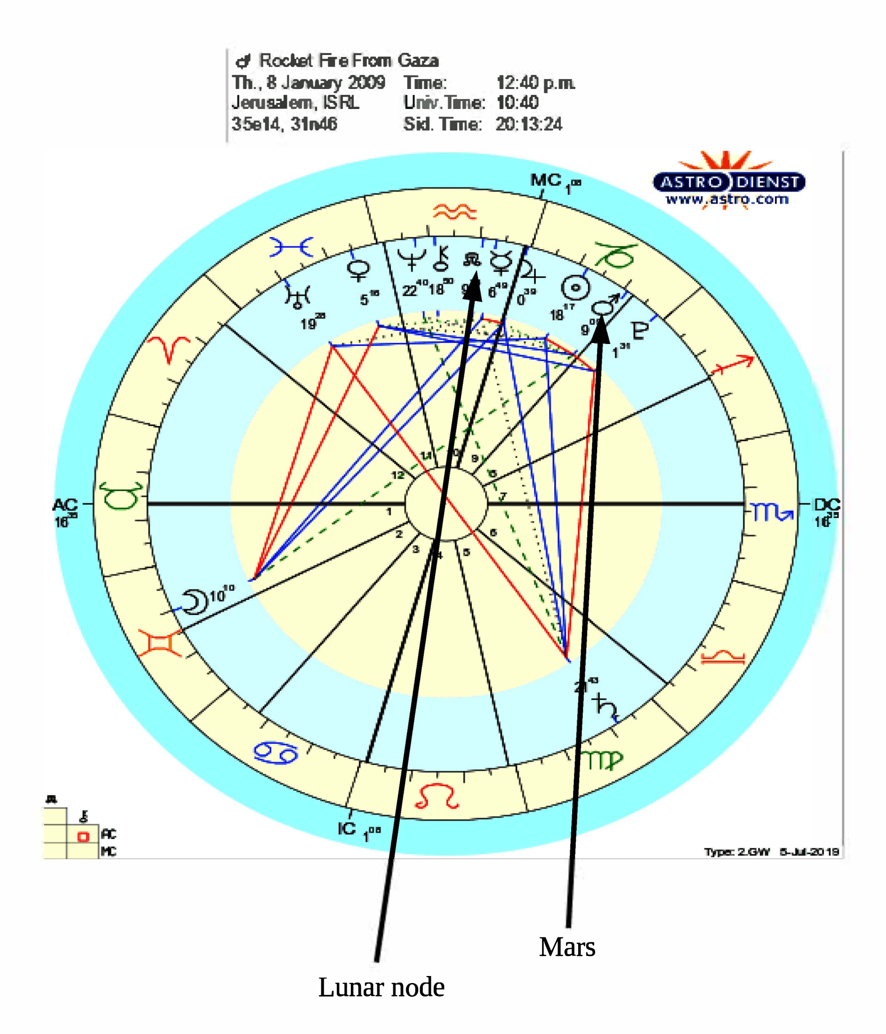

Mars is falling somewhere within a 30 degree vicinity of the lunar nodes on either side of the astrochart during the time to rocket fire escalation from Gaza. If we go back to "Figure H" and look at the rocket attacks for 2007, we can see that most of the rocket fire for that year took place in

May. There were 257 rockets fired from Gaza during that month. If we look at the astrochart for May 2007, we can see that Mars is close to the lunar node.

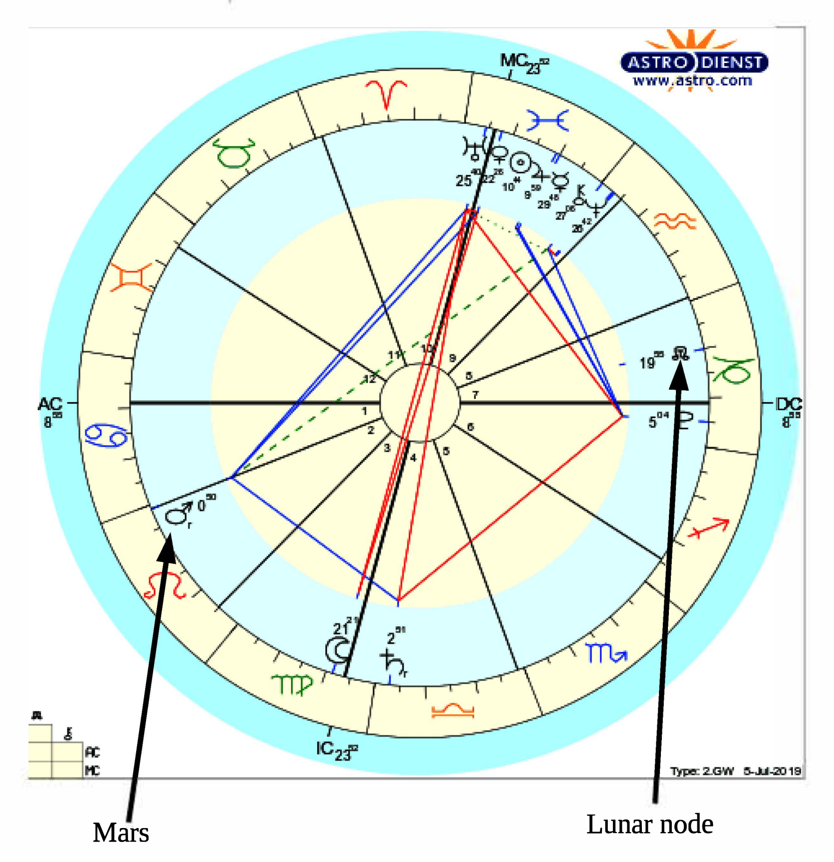

We can see Mars within close range of the lunar node in this Chart calculated for May 2007. If we go back to “Figure H” and look at late 2008/early 2009 when the Gaza War(also knows as Operation Cast Lead) took place, we’ll find that once again Mars is in the vicinity of the lunar node. It gets to within 30 degrees of it in early January. See the next page.

Here Mars gets within 30 degrees of the lunar node. We can see in Figure H that the rocket fire doesn't really settle down until March 2009. This would align with Mars producing an effect while being near the lunar node during that timeframe. If we go back to Figure H and look at the year 2010, we notice that the highest concentration of Rocket Fire took place during the month of March. During that time, 35 rocket attacks took place. On the next page is the astrochart for March 2010.

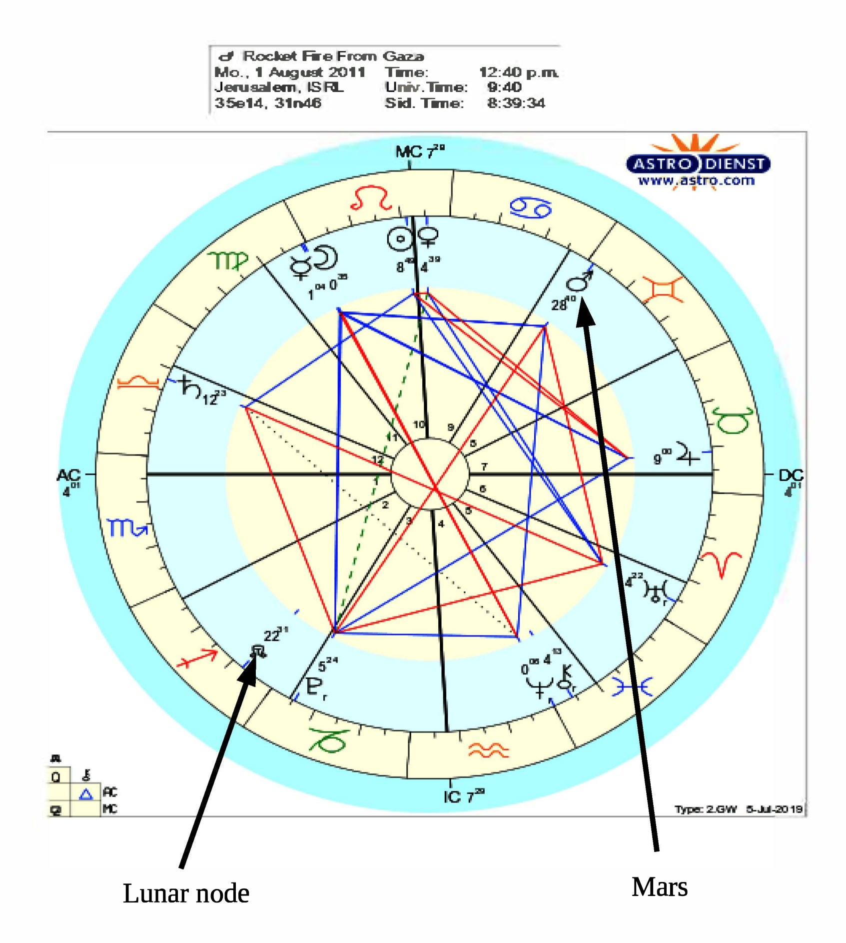

Rocket Fire From Gaza
Mo., 1 March 2010 Time: 12:40 p.m.
Jerusalem, ISRL Univ.Time: 10:40
35e14, 31n46 Sid. Time: 23:37:28

Once again, same thing, but this time Mars in on the opposite side of the lunar node, but within 30 degrees. This still aligns with Mars on either side(near conjunction or near opposition) of the lunar node being a factor in rocket attacks from Gaza.

If we go back to Figure H and look at the year 2011, we find that most of the rocket attacks that year took place in August. There were 145 rockets fired from Gaza into Israel territory.

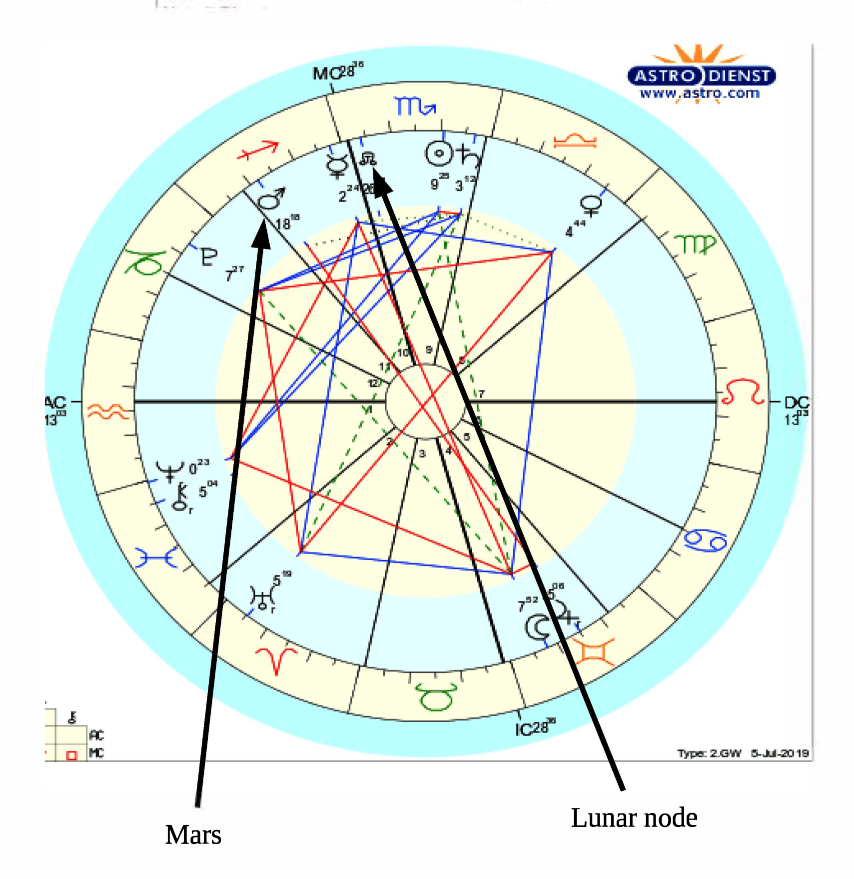

Lets look at the astrochart for August of 2011 and see if Mars falls within 30 degrees of the lunar node.

Once again Mars falls within 30 degrees of the lunar node during a month where the highest level of rocket fire for the year was concentrated.

If we go back to Figure H and look at the next year, which would be 2012, we find that the highest level of rocket fire took place in the

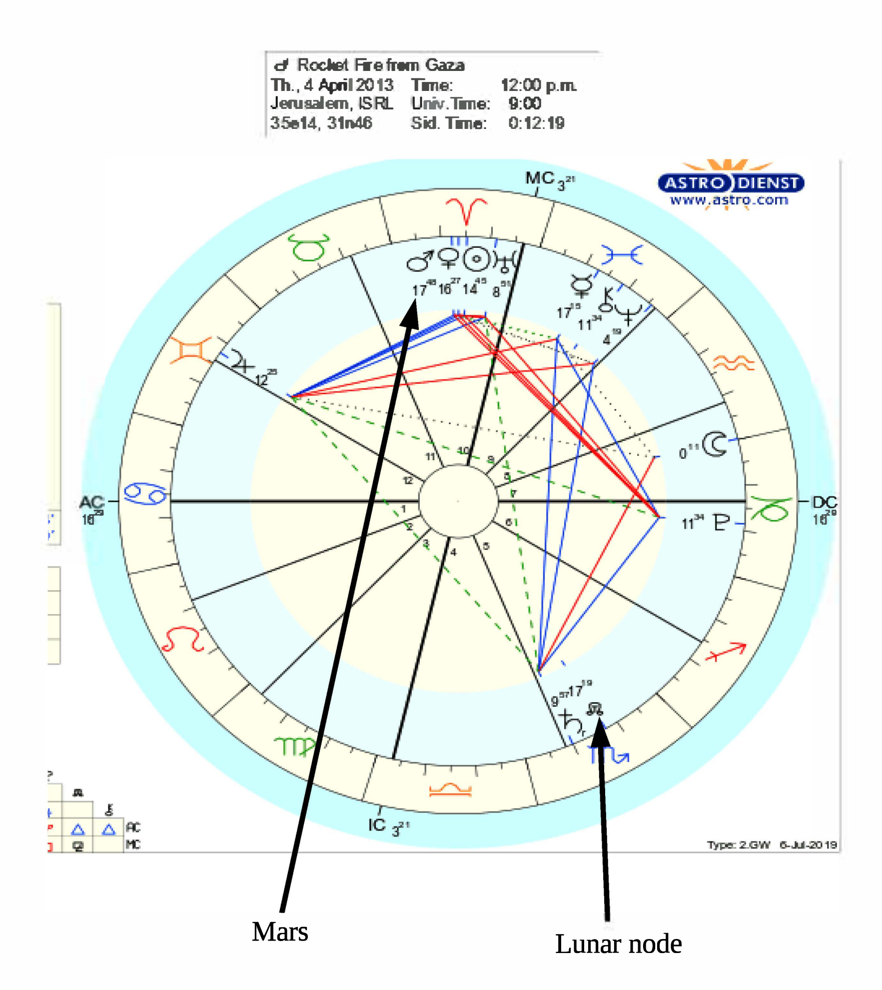

month of November, in which there was 1734 rockets fired from Gaza into Israel. That's a significant spike in rocket fire. If we pull up the astrochart for November of 2012, we can see Mars is once again within a 30 degree vicinity of the lunar node.

Mars is clearly within 30 degrees of the lunar node during a significant rise in rocket attacks against Israel in November of 2012.

If we go back to Figure H and look at 2013, we find that the highest concentration of rocket fire from Gaza that year took place in April,

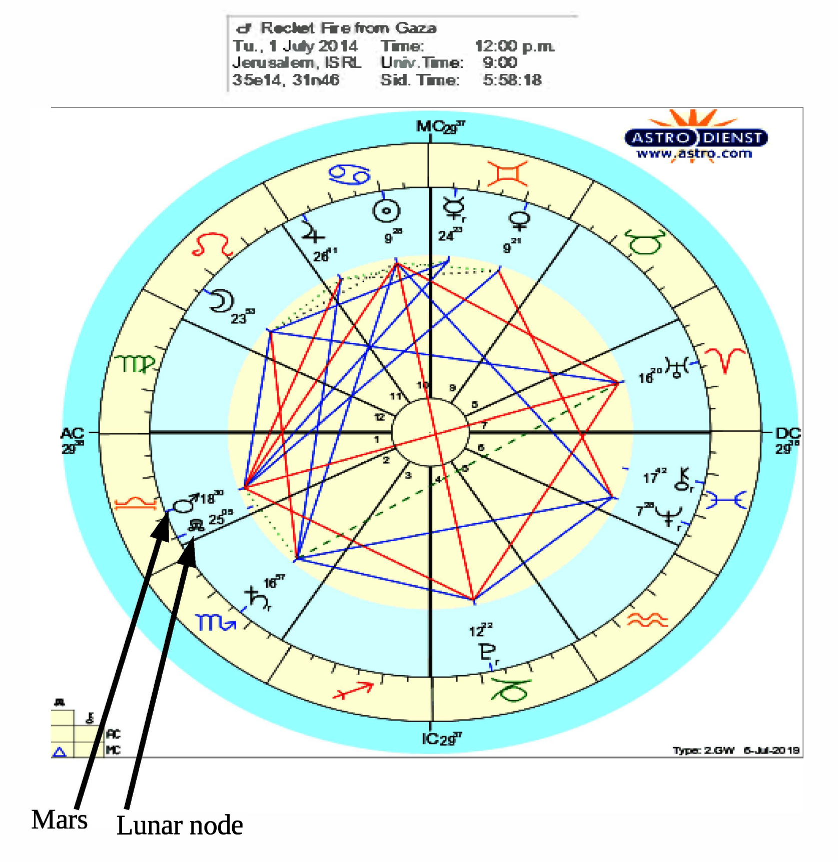

which is also the month that the Boston Marathon Bombing took place in the US. In April, there were 17 rockets fired from Gaza. Here is the astrochart for April 2013.

Once again Mars makes it to within 30 degrees of the lunar node, on the exact opposite side. As stated before the both sides of the chart are the same.

Now in going back to Figure H, we can have a look at 2014 and see which month had the highest concentration of rocket fire that year.

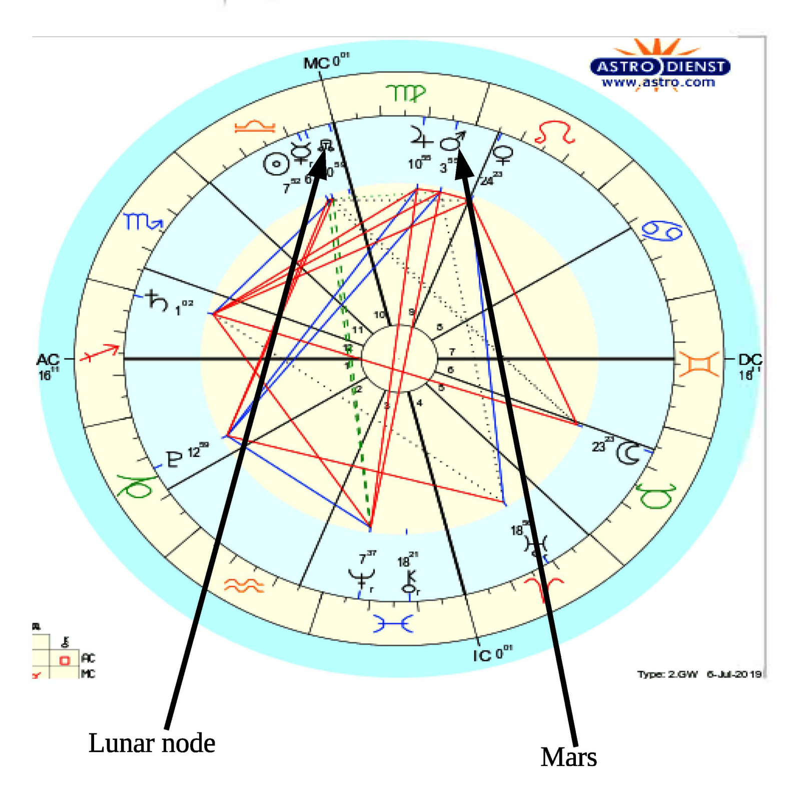

We can see in 2014, the month of July had an extreme spike in rocket fire with 2874 rockets being fired from Gaza into Israel. Here is the chart for July 2014:

Once again, Mars is within 30 degrees of the lunar node, this time on the same side.

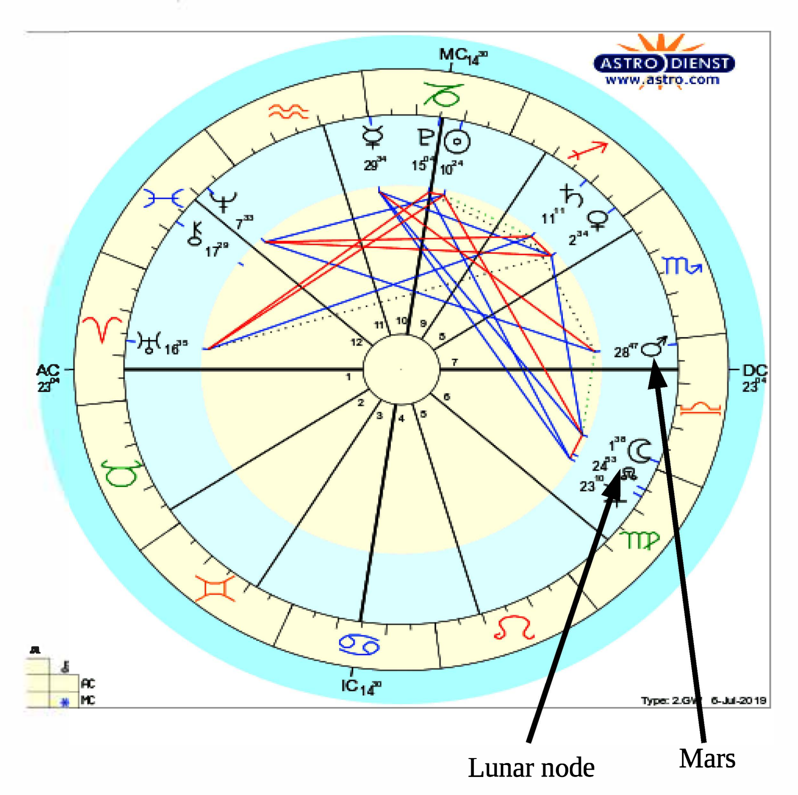

Lets go back to Figure H and look at 2015 to see which month had the highest concentration of rocket fire from Gaza. 2015 doesn't seem to have much activity in terms of rocket attacks from Gaza. However, if we go ahead and observe anyway, we find that October turns

out to be the month where the highest level of rocket attacks took place for 2015. Here is the chart for October 2015:

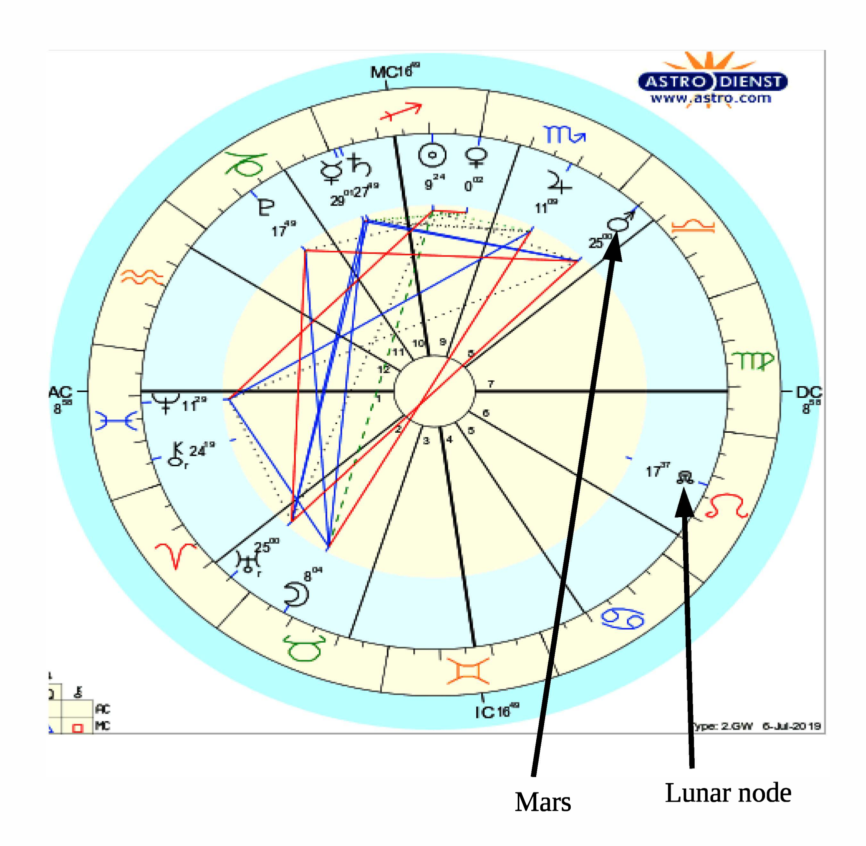

There it is again. Mars in within 30 degrees of the lunar node during a month of rocket fire escalation from Gaza.

If we go back to Figure H to see which month had the highest concentration of rocket fire from Gaza in 2016, we find January to be the month where most of the activity took place. See the chart on the next page

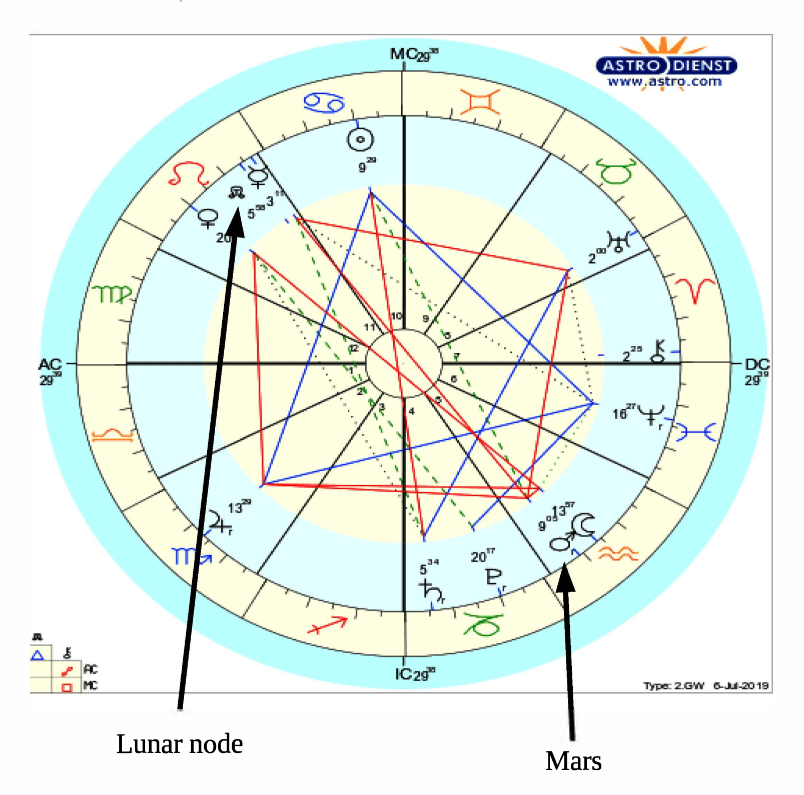

In January of 2016, Mars is just leaving from within 30 degrees of the lunar node. 2016, however, did not bear much significance in terms of violent conflict.

In Figure H, the concentration of rocket fire in 2017 took place in December. 28 rocket were fired from Gaza during that month. See the chart on the next page.

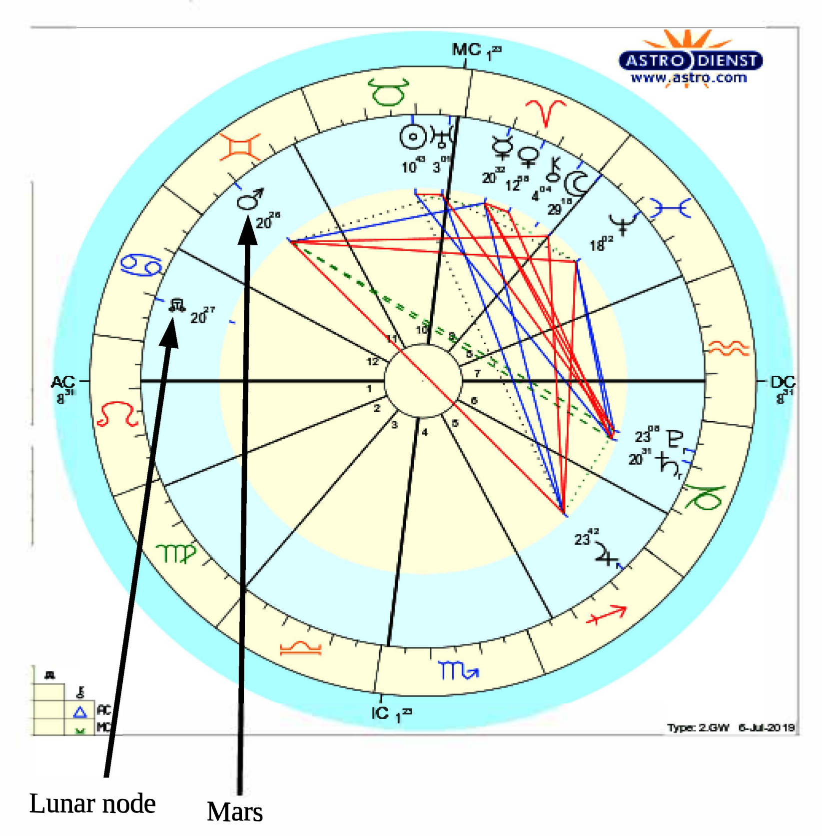

Mars is well out of range of being with 30 degrees of the lunar node, so one cannot say that the escalation in December of 2017 was related Mars. Mars would have last been within 30 degrees of the lunar node back in August of 2017, but there was only 1 rocket attack that month.

Lets go back to Figure H and have a look at 2018. We find that the month that had the greatest amount of rocket fire from Gaza that year was July. There were 174 rockets fired into Israel from Gaza during that time. See the astro chart on the next page.

In this one, Mars is within 30 degrees of the lunar node, on the opposite side. So once again, that position of Mars has showed up during a month of escalation.

In going back to Figure H for 2019, we see that May is the month with the highest concentration of Rocket Fire that year. There were 600 rockets fired from Gaza into Israel. Let see if the astro chart on the next page continues to show a correlation between Mars being within 30 degrees of the lunar node and escalating rocket fire from Gaza.

Once again, Mars is within 30 degrees of the lunar node during a month of escalating rocket fire. May 4, 2019 was the day that the rocket attacks were launched from Gaza. In this chart of May 1, we see Mars just entering within that 30 degrees from the lunar node.

One can say, after reviewing this, that there is a statistical significance regarding the correlation between escalating hostility from Gaza toward Israel and Mars being within 30 degrees of the lunar node. This would make the 666 system(Mars 360) a necessity to military

defense and would essentially require military itself to consider the observation of Mars. Otherwise, they would be turning a blind eye to a major cause of hostility toward a nation. Israel would also have to realize that observing Mars in any way would constitute giving credence to the Christian Bible, which is the only Holy Book that warns about this Mars 360(666). Making use of observation of Mars would constitute a form of acceptance of the Mars 360 system.

With this new information, one can demonstrate in real time a forecast of the next flare up from Gaza and thus predict fire to come down from Heaven as prophesied in Revelation 13:13. For 2019, Mars becomes out of range of being within 30 degrees of the lunar node on

July 29th, 2019

Jan 15, 2020 – April 3, 2020 is the timeframe that Mars is within 30 degrees of the lunar node during the year of 2020. That is the time when the heaviest rocket fire from Gaza would take place that year.

The lunar nodes are basis for eclipses, which has been determined as the return of Christ. With this example of the lunar nodes being a factor in Israel's security, specifically when it comes to Mars being within 30 degrees of it, we are thus able understand how Israel could be left to re-consider their stance on Jesus Christ. We also see how an entire world could come under Mars 360 if observation of Mars constitutes a matter of survival. This observation in terms of systematic use would also constitute a form of worship. In terms of bible prophecy, the significance of this correlation between Mars, the lunar nodes and fire from Gaza would warrant a statue being erected in Israel in honor of Mars/Ares, the god who was wounded and yet lived. It also warrants a peace plan between the Palestinians and Israel by way of methodically scheduling ceasefire agreements at the start of these Mars transits within 30 degrees of the Lunar node. Not doing

so would cause Israel to continue to labor for its security, and the Palestinians to continue showing themselves as following a pattern influenced not by they themselves, but by Mars's(Dajjal) position in the sky. A peace treaty centered around Mars would be the only way to prove that not to be the case. Below is the Mars 360(666) plan for peace between Israel and Palestine. It strictly revolves around making ceasefire agreements when the planet Mars is within 30 degrees of the lunar node. Since escalation of rocket fire has normally taken place during that time, making concessions for peace during that time can only serve as a mitigatory factor on the damage arising from maximum hostility. At the end of the time period of Mars being within 30 degrees of the lunar node on either side, the ceasefire agreement would be terminated. The reason for this outlook is to remain cognizant of the reasons for the tension between Arabs and Jews, while also being vigilant with regard to the need for human citizens in both Gaza and Israel to remain safe. These are the recommended dates for ceasefire agreements. All the dates consist of Mars being within 30 degrees of the lunar node, which usually lasts about 3 1/2 months. Judging from the earlier statistics, failure to meet a peace consensus would likely result in escalation during these times:

Jan 15, 2020 – April 3, 2020

Feb 9, 2021 - May 13.2021

Nov 4, 2021 - Jan 22, 2022

June 22, 2022 - Sept 19, 2022

Dec 26 2022 - Jan 24, 2023

Aug 24, 2023 - Nov 15, 2023

April 12, 2024 - June 25, 2024

June 5, 2025 - Sept 4, 2025

Feb 4, 2026 - April 19, 2026

Sept. 27, 2026 - June 12, 2027

Request for a statue of Ares/Mars to be made after significant escalation of rocket fire from Gaza during any of the above times or during anytime Mars is within 30 degrees of the lunar node. It's important to mention(along with making the request) that Ares, according to mythology, was wounded and healed.
